

# New Sat Finder Meter

---

There is a new satellite tuning meter available from [satplus.com.au](http://satplus.com.au) SF3239 POSI ID Satellite finder, for about \$140.00, that will only detect the satellite one requires. The unit comes programmed for many satellites but is defaulted to Optus C1 satellite. I have one and it does live up to what it claims, very easy to use, and would be great for the novice satellite user.
